## UNDERSTANDING "STEALTH" SPONGES
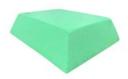

### Non-Stealth or "Traditional" Sponges

Sponges formed and cut into traditional shapes, typically featuring standard right angles. This type is the most common style across all positioning sponges. Right angles typically show as artifacts during imaging when a form of coating or covering is applied to the core sponge.

### Stealth or "Flared" Sponges

Traditional sponge shapes reformed with proprietary "flared" sides, removing most right angles. This *patented* design helps significantly reduce the chance of artifacts during imaging. Flared sides increase the overall size of the sponge, typically at the base of the product.
